

Comfort
Release®

Sticks when you need it.
Releases when you don't.

Cost of Care and Adhesive Wound Care Products

- A skin injury will result in an increased cost of care.
 - An estimated 1.5 million MARSI (Medical Adhesive-Related Skin Injuries) occur annually from adhesive bandage, tape and dressing removal.
 - Average cost associated with a medical adhesive associated skin injury is \$88.50.
 - Breaking the skin increases risks for secondary infection, which further increases cost.
 - High risk patients include pediatric, geriatric or anyone with multiple underlying medical conditions or taking multiple medications that cause the skin to be more fragile.
 - Comfort Release® is a SWITCHABLE adhesive that is turned OFF before it is removed from the skin. Our products adhere as well as the market leaders but are **MORE breathable and skin friendly**, creating an environment for **less skin reactions!** No adhesive removers are needed.
 - Improved patient satisfaction yields higher return patients and higher reimbursements.
-
- **Decrease MARSI = saving costs.**
 - **Decrease SKUs = saving costs.**
 - **Decrease number of dressings used = saving costs.**
 - **Decrease secondary infection = saving costs.**
 - **Decrease nursing time to slowly remove other bandages, tapes & dressings = saving costs and improving productivity.**
