Discover Comfort Release®

Put an end to painful bandage and tape removal.

Comfort Release® is a line of advanced wound care dressings, bandages, and tapes that improve patient outcomes and help you provide pain-free care. With it you can dispense care while avoiding dressing-related wounds, and decreasing the risk of infection from skin tears, blisters, and damage to hair and healthy tissue.

Get confident with optimal adhesion and pain-free release with Comfort Release® in these four easy steps.

Nurses and patients agree on Comfort Release®

We ran a product evaluation with a group of nurses, adult patients, and child patients with their caregivers. Take a deep dive into our results and see how Comfort Release® could improve your outcomes too.

Group 1: Nurses

Our group of nurses each had more than 20 years of experience in pediatric, adult, and geriatric care.

Group 2: Patients

Our second product evaluation was a group of 100 adults, between 17 and 94 years old, of which 52 were female & 48 were male.

Group 3: Children

Our third cohort volunteering for a product evaluation was a group of 100 children, between 3 and 19 years old, and their consenting adults.

Group 1: Nurses

We first asked our group of nurses a series of questions before showing them our Comfort Release® products.

89% agree trauma to a wound (or surrounding area) often occurs while removing a bandage/dressing (compared to 11% disagree).

89% - Agree

11%

78% agree removal of bandage is a significant problem in wound care management (compared to 22% disagree).

78% - Agree

22%

89% agree patients complain of pain during dressing/bandage removal (compared to 11% disagree).

89% - Agree

11%

After seeing, testing and trying our product, **100% of surveyed nurses agreed** that Comfort Release®:

- Decreases pain and trauma associated with dressing removal
- Decreases the frequency of skin tears
- Improves patient comfort during dressing removal

Look forward to shorter patient stays and improved patient outcomes and comfort with our patented technology.

Group 2: Adult Patients

Our 100 adult patient participants were asked a series of questions before and after wearing sample Comfort Release® bandages for 2-3 days.

They were given limited background information and simple label instructions for use. All signed normal consent to participate in the evaluation. None were paid.

95% had prior experience with bandages and tapes
[compared to 5% disagree]

95% - Agree 5%

78% reported that all other bandages fall off with simple bathing
[compared to 12% disagree & 10% don't know]

78% - Agree 12% 10%

80% agree they're dissatisfied with other bandages and tapes
[compared to 20% disagree]

80% - Agree 20%

99% reported Comfort Release® stayed on (90% for full test period of 48 or 72 hours; 9% for 24-36 hours and 1% less than 12 hours)

90% - Agree 9% 1%

88% agreed Comfort Release® easily removed with rubbing alcohol
[compared to 9% disagree & 3% details not provided]

88% - Agree 9% 3%

94% agreed Comfort Release® left no glue residue
[compared to 6% who reported minimal residue]

94% - Agree 6%

After seeing, testing and trying our product,
94% of adult patients agreed they were
satisfied with Comfort Release®.

Group 3: Children*

*Consent was obtained from each child's parent/legal guardian before their participation in the study.

Each of our 100 child participants and their consenting adults were asked to provide answers about their experience with other adhesive products and with the results of using Comfort Release® samples. All consenting adults signed a written consent, and each child received a gift certificate to a local toy store.

94% had prior experience with bandages and tapes
(compared to 6% disagree)

94% - Agree 6%

81% agree that all other bandages fall off too easily
(compared to 19% disagree)

81% - Agree 19%

93% agree that all other bandages fall off with simple bathing
(compared to 7% disagree)

93% - Agree 7%

84% agree all other bandages are painful to remove
(compared to 16% disagree)

84% - Agree 16%

86% of children had Comfort Release® bandages on for the full test period — all of which easily removed their bandages with alcohol

86% - Agree 14%

86% of children easily removed their Comfort Release® bandages with rubbing alcohol (compared to 14% that did need the alcohol)

86% - Agree 14%

86% removed Comfort Release® with no glue residue left on skin
(compared to 14% with minor residue left after bandage removal)

86% - Agree 14%

94% agreed Comfort Release® was not painful to remove
(compared to 6% reporting slight discomfort)

94% - Agree 6%

After seeing, testing and trying our product,
94% of children and their parents agree
they'd purchase Comfort Release®.

Make Comfort Release® a part of your wound care routine...

		
Easy to apply	Water resistant	Breathable
		
Made to last and stay on	Releases easily	Recommended by nurses

Be a part of easing the pain of changing dressings with Comfort Release®.

The unique, first in its class series of bandages and tapes combine skin-friendly, pressure sensitive, and smart switchable adhesive technology to provide patients with trauma-free and painless removal. It's made with a unique polymer built into the bandage's adhesive backing. A simple swipe with rubbing alcohol helps release the stickiness, so you can remove it without pain or discomfort. Once the alcohol evaporates, adhesive strength returns, so you can remove, reposition, and replace Comfort Release® several times.

Comfort Release® Acute Wound Care - First Aid Adhesive Bandages & Tapes:

For sensitive skin, easy to apply, water resistant, breathable, long lasting, with painless release. Bandages are made with a nonwoven film and tapes are made with a transparent, bidirectional tear polypropylene film — both with a strong acrylic (non-latex) adhesive.

Comfort Release® Advanced Wound Care Adhesive Transparent Dressings:

The center transparent windows are made of thin polyurethane material with a low level of adhesion, are waterproof and highly breathable for better wound healing and skin health. The border areas are made of a nonwoven film with a strong acyclic adhesive with our triggered easy release. Made in USA.

Comfort Release® Advanced Wound Care Border Adhesive Foam Dressings:

The center placed hydrophilic foam pad is made of soft foam, which is comfortable, conformable and highly absorbent. It is breathable and capable of expanding up to 50% when fully saturated. Made in USA.

Comfort
Release®

Sticks when you need it.
Releases when you don't.

Comfort Release® is perfect for:

- Children, athletes, older adults
- Anyone with sensitive, fragile, or thin skin
- Anyone taking blood thinners, steroids, or medication that affects the skin
